The Truth About High Cholesterol: Exposing the Medical Fraud

For decades, we have been bombarded with warnings about the dangers of high cholesterol. We've been told that high cholesterol is a major risk factor for heart disease and stroke, and that we need to take statin drugs to lower our cholesterol levels.

But what if everything we've been told about high cholesterol is wrong? What if the medical establishment has been perpetrating a fraud on the public, all for the sake of profit?

In his groundbreaking book, *High Cholesterol Medical Fraud*, Dr. John Abramson exposes the truth about high cholesterol. He shows that the medical establishment has exaggerated the risks of high cholesterol, and that statin drugs are ineffective and even dangerous.

Dr. Abramson is a practicing physician and a professor of medicine at Harvard Medical School. He has spent years researching the science of cholesterol and heart disease, and he has concluded that the medical establishment has been misleading the public about the risks of high cholesterol.

In *High Cholesterol Medical Fraud*, Dr. Abramson presents a wealth of evidence to support his claims. He shows that:

- The vast majority of people with high cholesterol do not develop heart disease or stroke.
- Statin drugs are ineffective at preventing heart disease or stroke.

- Statin drugs can cause a wide range of side effects, including muscle pain, liver damage, and kidney failure.

Dr. Abramson's book is a must-read for anyone who wants to know the truth about high cholesterol. He provides a clear and concise explanation of the science of cholesterol and heart disease, and he exposes the medical fraud that has been perpetrated on the public.

If you are taking statin drugs, I urge you to read this book. It may save your life.

What You Will Learn from This Book

- The truth about the risks of high cholesterol
- The ineffectiveness of statin drugs
- The dangers of statin drugs
- Natural ways to lower your cholesterol
